

Public Design

stilum 
PARK

stilum is unique – and
complies with all the
requirements of public
spaces.

Modern design in
perfection offers
completely new
possibilities of emphasizing
architecture and landscape
design.

stilum leaves a decisive
imprint on the overall image
of any area and handles the
resource of free space with
caution.

Components and materials
of highest quality guarantee
a long useful life.

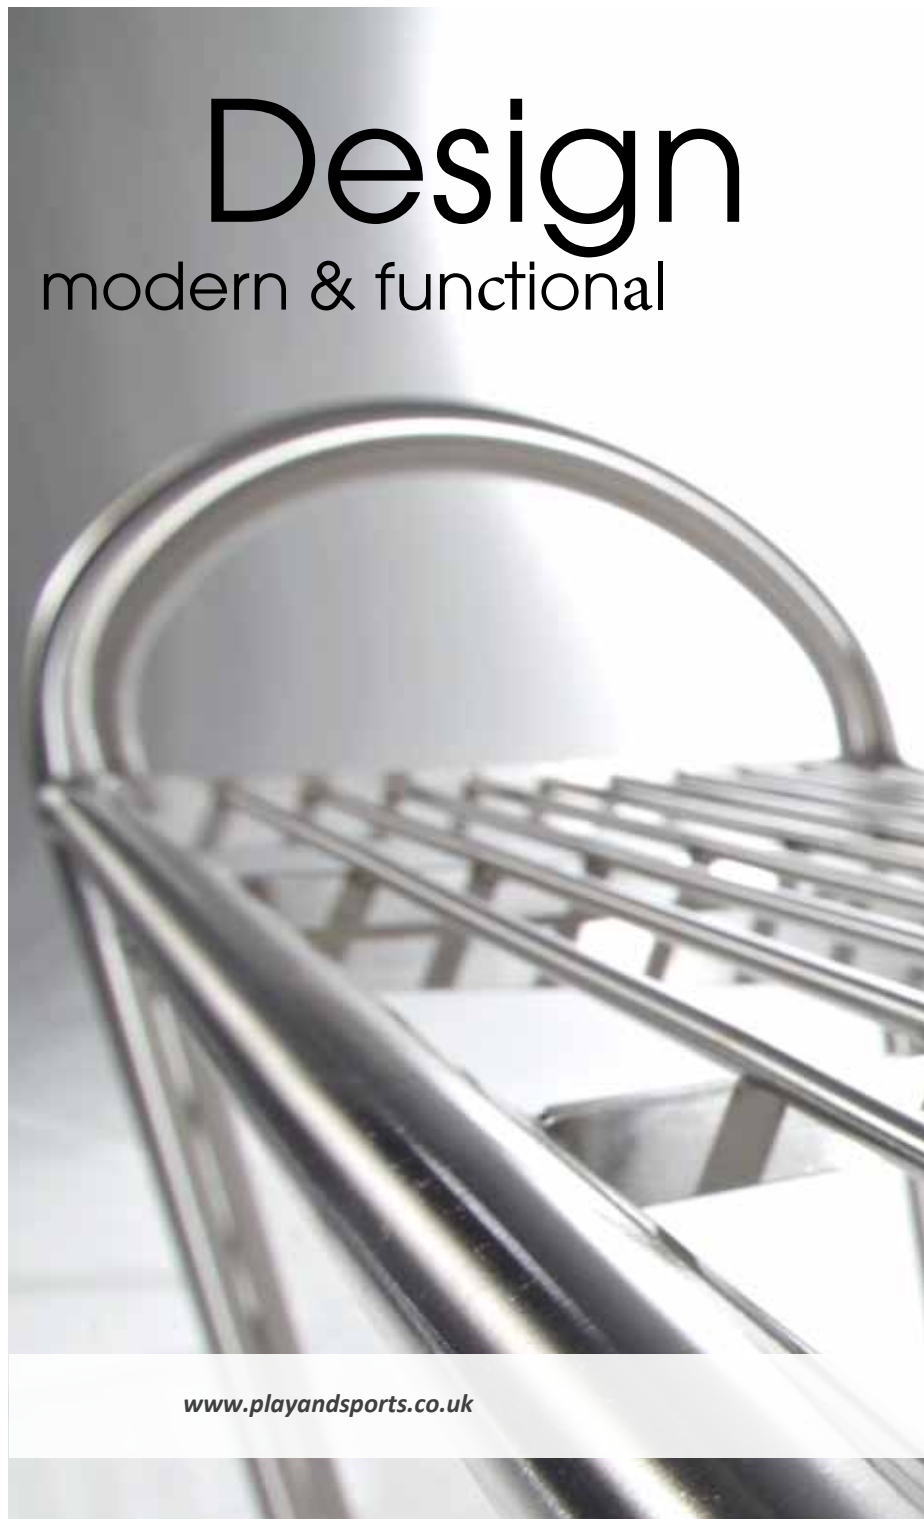

stilum products are
exclusively manufactured in
Germany and, as a matter
of fact, comply with all the
relevant standards.

Welcome at the world of stilum

What impression do we want to leave? How much do we care about citizens and guests? What does quality of life mean to us? The answers to these questions make up the requirements for designing free spaces. A bench of an extraordinary design or loungers have a strong signal effect, because they attract attention and, at the same time, invite to stay and relax.

Modelled on the design of old Morse lamps, the two spotlights "lumos" come along in an extremely solid construction made of softly gleaming stainless steel.

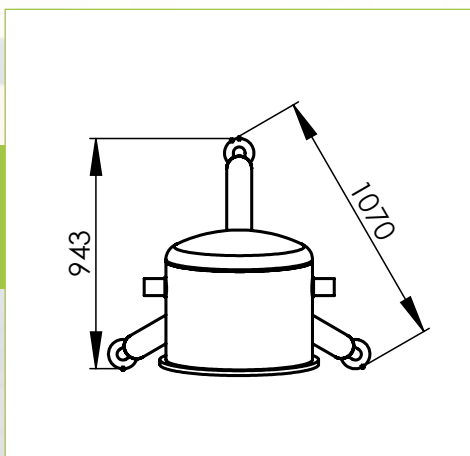

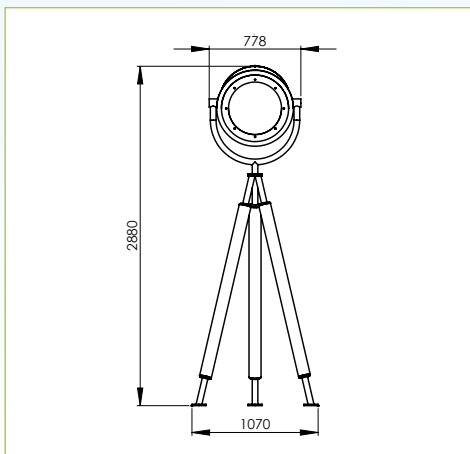

Held by a compact U-bow, the lamp head can be turned up and down drawing spectacular attention to your object.

The glass cover is fastened by means of a screwed ring and the solid tripod prevents the lamp from collapsing.

Balls and cubes are shapes which cannot be improved. Made of high-quality rubber granulate, they serve as attractive seating furniture, as impact-absorbing play elements or as exceptional margin stops.

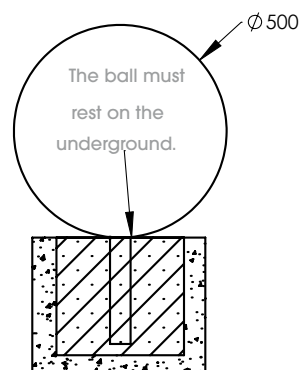

In addition, they are extremely solid. Thanks to the flexible rubber granulate, the boundary post "postis" is an ideal element for driveways and path boundaries. "postis" will not bend out of shape when slightly touched.

globus	74
quadro	75
postis	76 – 77

The design elements made of high-quality rubber granulate are extremely stable and require only a low level of maintenance.

A young girl with brown hair, wearing a headband with white daisies and a blue patterned dress, is smiling and leaning over a large, textured spherical playground element. The sphere is primarily orange with a red band. The background is a soft-focus outdoor setting.

*High-quality components
and materials as well
as sophisticated
construction and
manufacturing make
stilum products ever-
popular favourites
ensuring a high safety
for investments.*

**Cost-effective as regards price,
performance and maintenance**

stilum products are competitively priced in the market place. Your reassurance comes with High quality manufacturing techniques that ensure the minimum maintenance is required.

For the safety of the children: EN 1176

stilum play equipment is certified throughout the EU and is delivered with safety certificate:

It gives you the guarantee that stilum play equipment meets the latest European safety standards.

Technical information

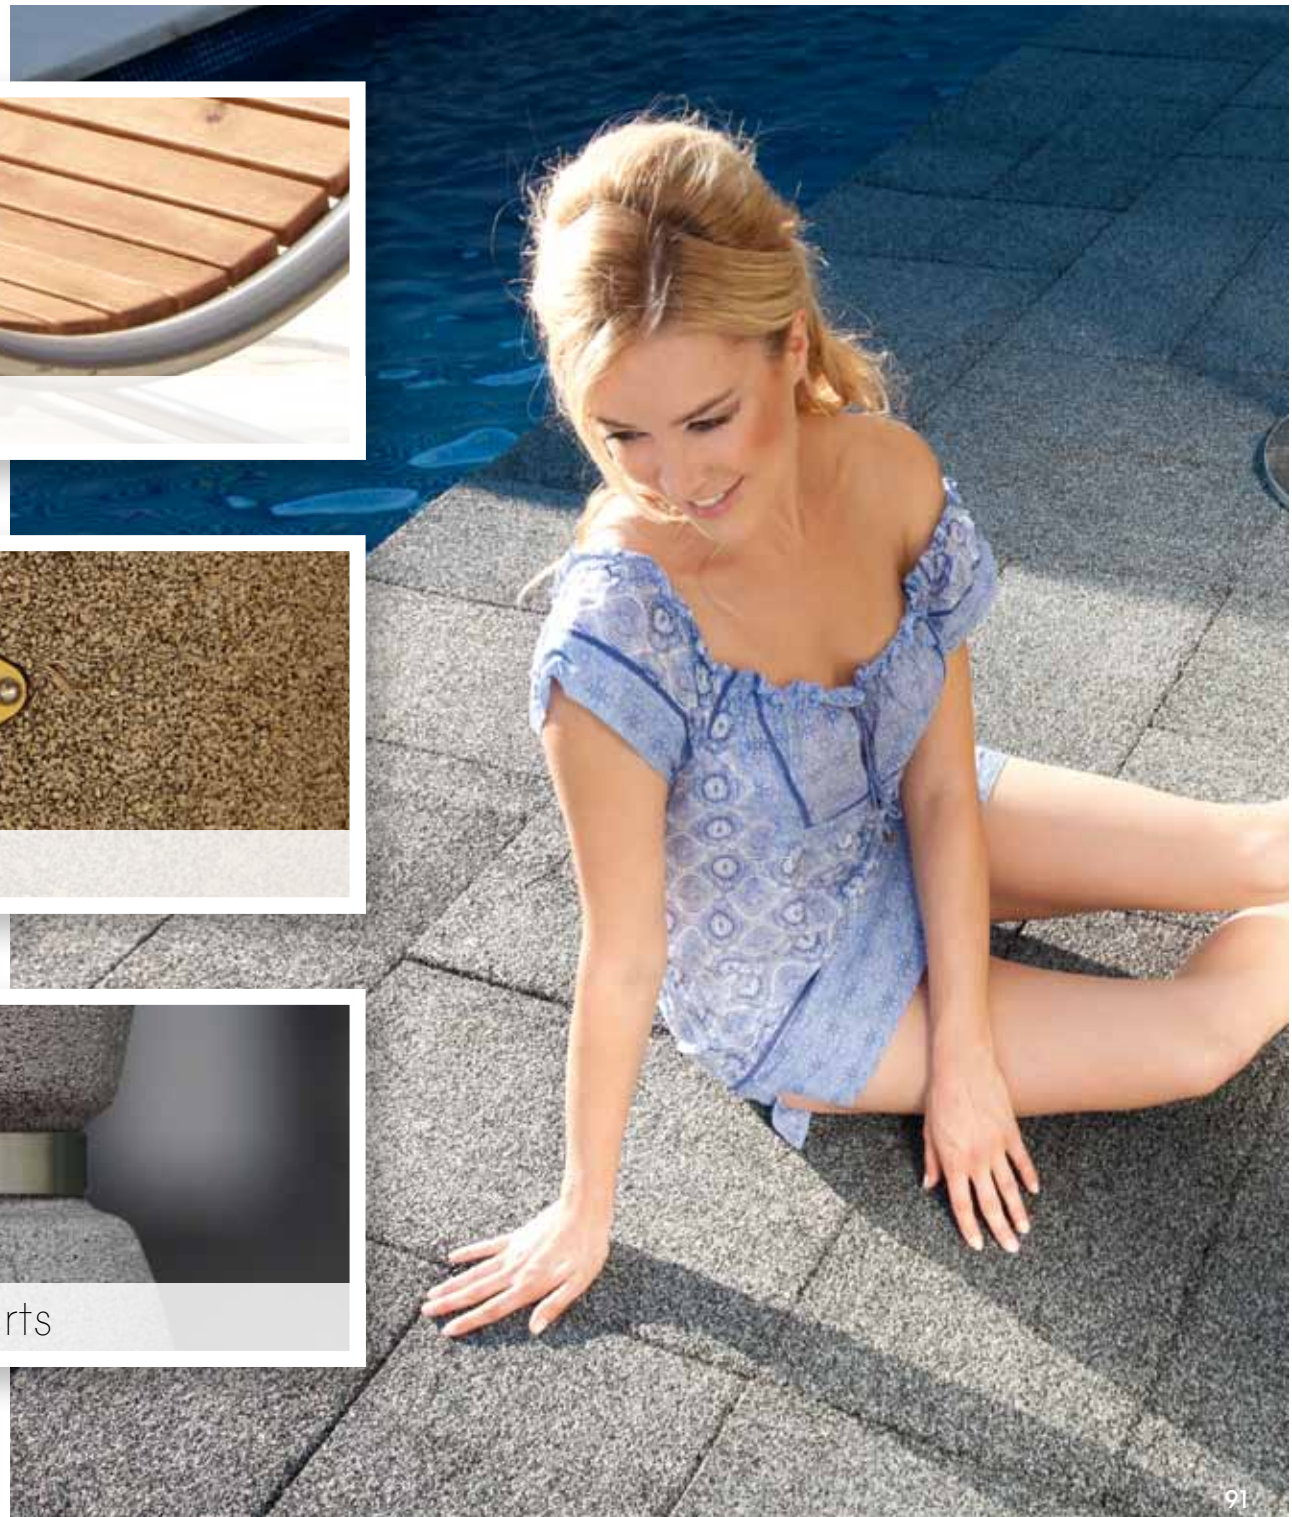

Custom-made equipment

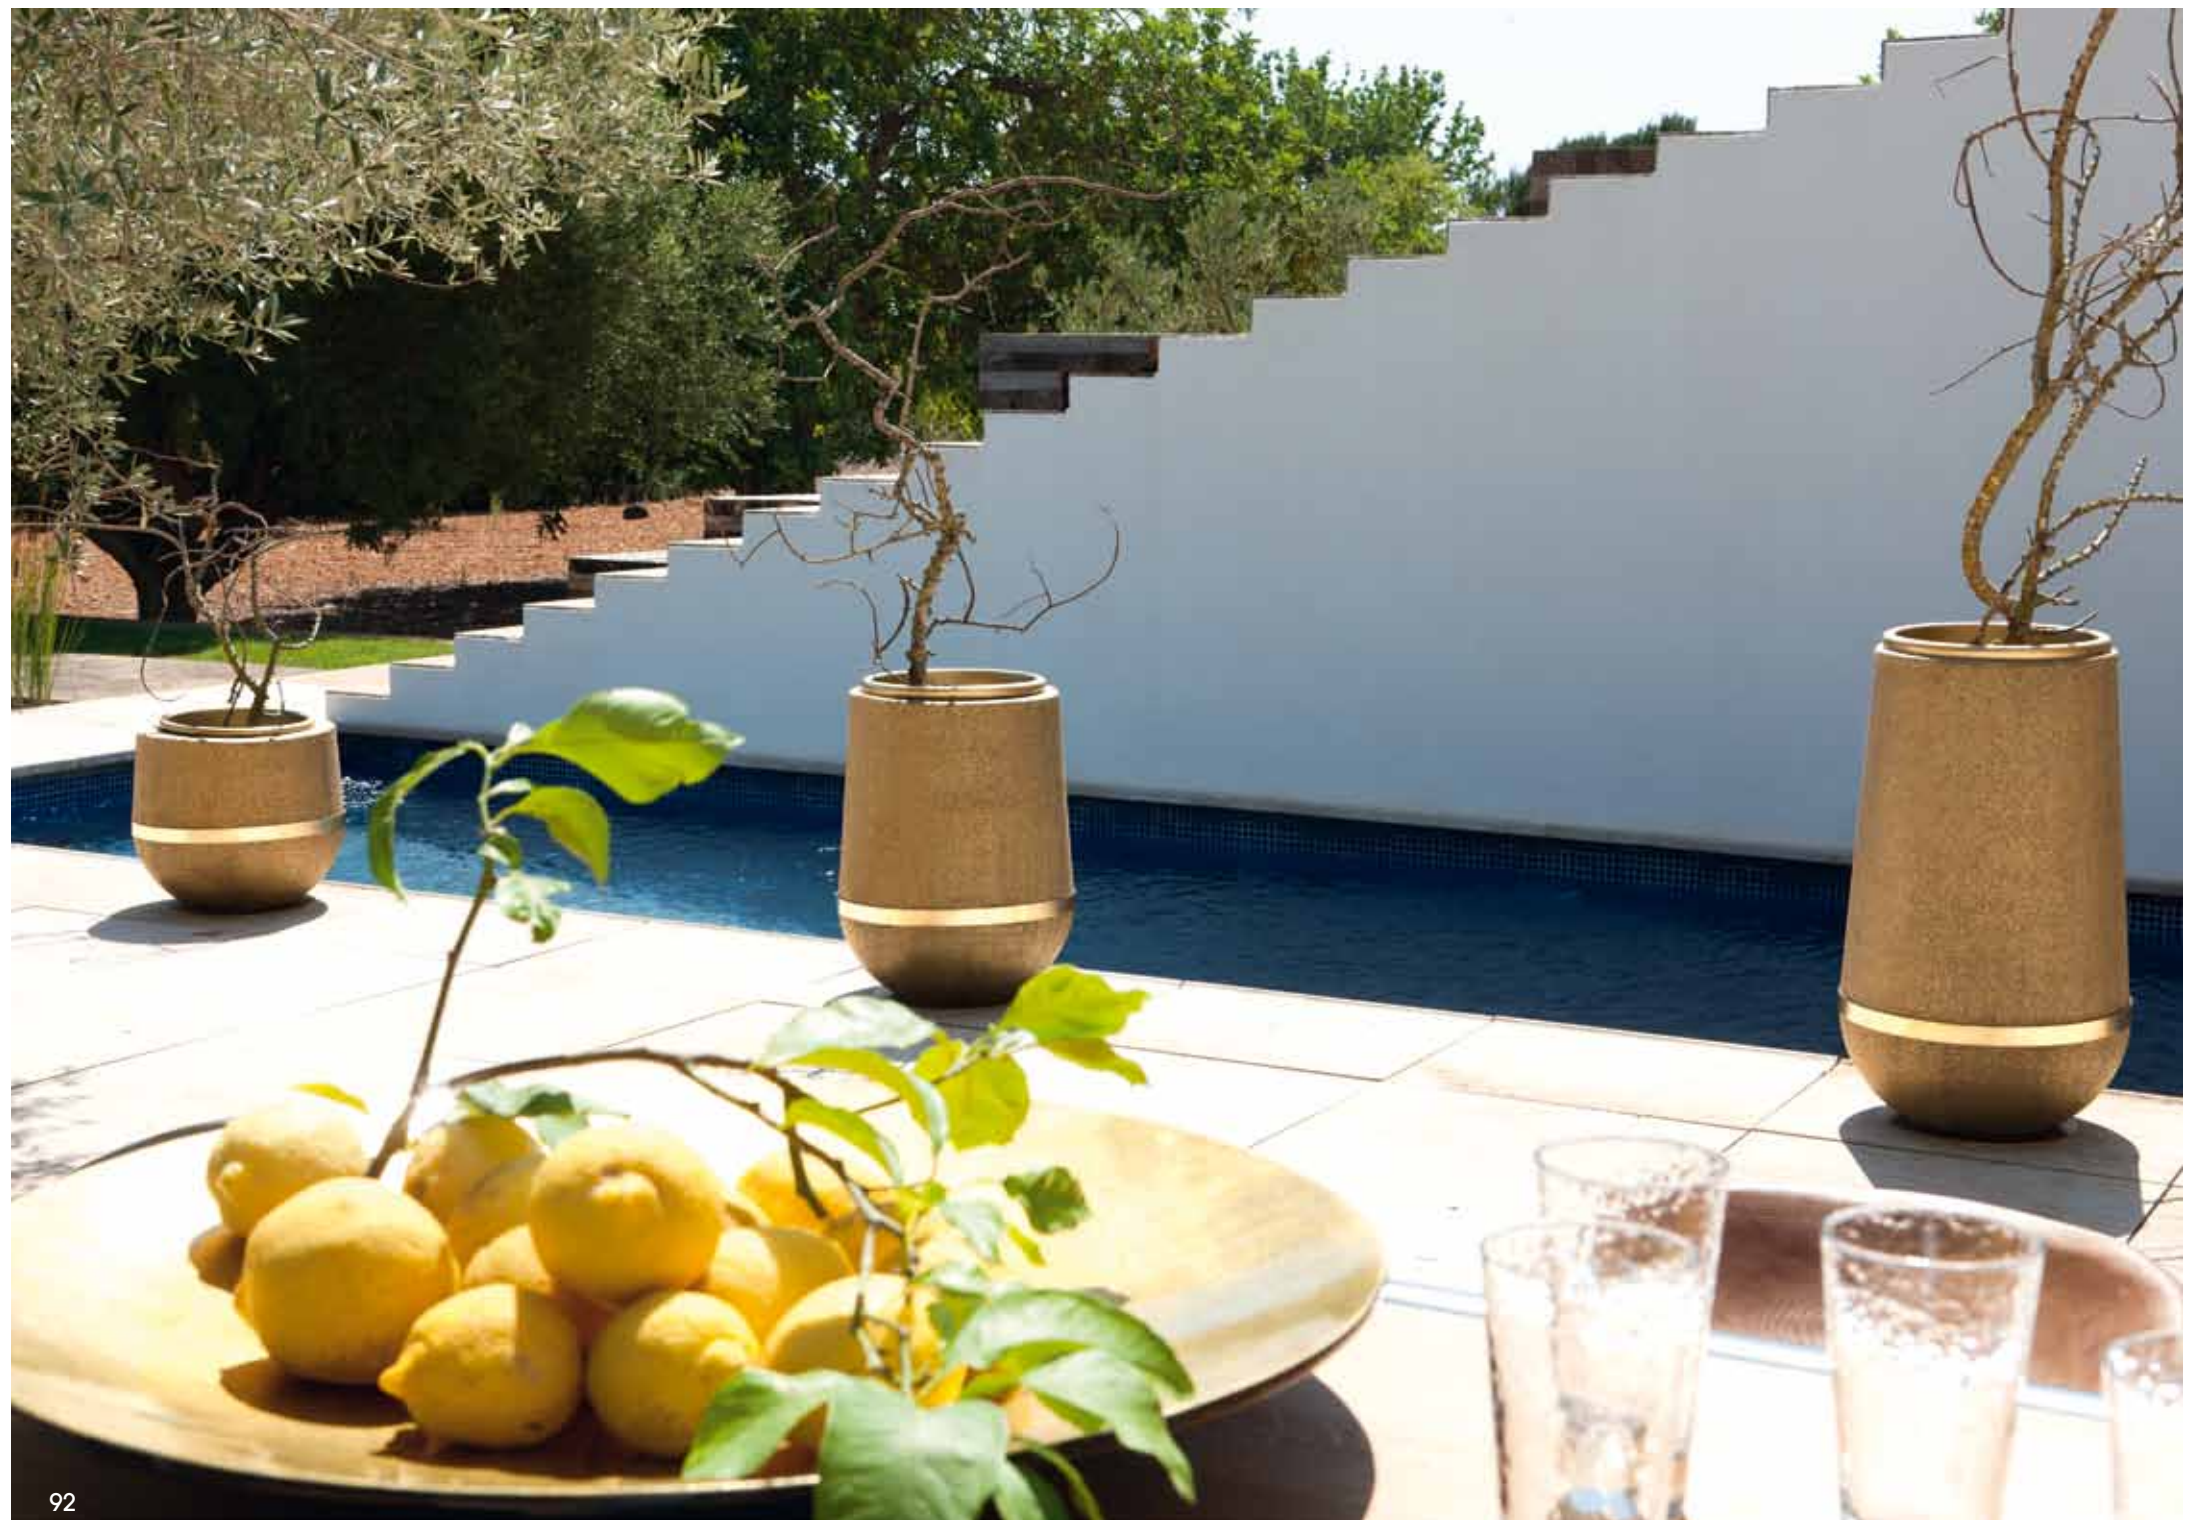

stilum warranty

Replacement parts

Delivery time

The delivery times are available upon inquiry. The dispatch date is stated with the confirmation of the order. Upon request, we also deliver and take over the assembly. The forwarding and assembly costs depend on the distance and scope of supply.

Scope of delivery

stilum play equipment is supplied complete incl. foundation bolts or anchor bolts and fastening material.

Assembly instructions and maintenance instructions are enclosed.

Replacement parts

The appropriate replacement parts for all stilum play equipment are always available. For reasons of safety and to meet the guarantee conditions, only original stilum replacement parts are to be used in repairs.

Also for reasons of safety and to protect the original stilum design, our replacement parts must only be attached to original stilum equipment.

stilum colouring

A typical characteristic of stilum design is the combination of silver-coloured steel and coloured rubber products.

Because other steel colours would impair the cheerful and high-quality appearance too much, we apologise that stilum equipment can only be produced from silver-coloured steel or stainless steel.

Custom-made equipment

If you have special wishes regarding an alteration to the ground-fastening for indoor assembly or of the colour variants of the rubber elements, please do not hesitate to contact us.

Product modifications

Due to the constant further development of our products and due to possible normative changes, we must expressly reserve the right to make technical and optical modifications to our products.

Installation depth

In our catalogue, next to the equipment descriptions, you will sometimes find different installation depths. These are required so that no danger of injury arises from the foundations. The installation depths are dependent on the type of floor being used or on the construction of the equipment.

To illustrate:

Installation depth »0«= play level:

The foundation is covered by the equipment or due installation/assembly on firm ground, no foundation is required.

Installation depth 150 mm:

When using synthetic fall protection or other firm ground, as these provide lasting cover for the foundation.

Installation depth 200 mm:

The installation depth can be shortened to 200 mm. This will be seen as a custom-made product and has to be declared separately when placing the order. Installation of synthetic impact protection is absolutely necessary.

Installation depth 450 mm:

When using loose filling materials such as sand or bark mulch, as these materials can succumb to a »wear- and-tear« effect.

All equipment is shown with their respective largest installation depths in our technical drawings.

stilum warranty

stilum grants following warranty terms:

10 years

- for all supporting/load-bearing construction elements.

5 years

- for all remaining parts. Excluded from this warranty shall be parts subject to wear.

for all remaining parts. Excluded from this warranty shall be parts subject to wear. Excluded from this warranty are all parts that are subject to wear and tear, these are in particular bearings, joints, shafts, chains, ropes, running surfaces, powder coatings.

Excluded from this warranty are also damages caused by:

- improper assembly which is not implemented according to our assembly instruction.
- wanton destruction and vandalism.
- insufficient maintenance by trained staff (according to DIN EN 1176-7, 8.2.2).

The warranty covers the delivery of equivalent spare parts. The warranty shall be valid from the date of delivery to the customer.

Precondition for the entry into force of the warranty is that the maintenance of our stilum products has to be executed by trained staff (according DIN EN 1176-7, 8.2.2) and also according to the guidelines of the employee. If necessary, a professional reparation using original spare-parts has to be made. The documentary of the proper maintenance (submission of the complete control and maintenance report shall be made according to the guidelines of DIN EN 1176, part 7) has to be performed by the employer and/or the operator of the playing equipment.

appealing design

constancy

distinctively

1. Scope of application, exclusion of the customer's general terms and conditions

stilm shall perform deliveries and services towards companies, legal entities under public law and special funds under public law only subject to the following General Terms and Conditions. stilm shall not accept customer's terms and conditions differing from or conflicting with these General Terms and Conditions, unless stilm explicitly confirms their validity in writing. The Terms and Conditions of stilm and the rejection of differing or conflicting terms and conditions of the customer will also be applicable if stilm, aware of differing or conflicting terms and conditions or the customer, performs deliveries and services to this customer without reservation.

In case of litigation, the German version of the General Terms and Conditions will exclusively prevail.

2. Conclusion of a contract

Quotations by stilm shall be without engagement and not binding, unless otherwise explicitly specified in the quotation. stilm shall be entitled to accept quotations made by the customers within a period of time of four weeks after their submittal. Declarations of acceptance as well as acknowledgements of order shall need to be in writing. In case of an execution of the order within the time limit for acceptance, the delivery note and/or the commercial invoice shall also be considered to be declarations of acceptance and/or acknowledgements of order.

3. Prices, terms of payment, default in payment

Deliveries and services for which fixed prices are not explicitly agreed shall be charged at the list prices applicable at the day of the conclusion of the contract; prices stated in catalogues, price lists etc. of stilm do not include the statutory value-added tax. This tax shall be stated separately to the statutory amount applicable at the day of invoicing. If an essential change in the price factors decisive for price calculation (e. g. increase in or lowering of prices of material, labour costs, freight charges or rates of customs) occurs, either contract party will be entitled to request the revision of prices by negotiation.

Payments of purchase prices shall become due immediately. Claims for compensation under a service contract shall become due at acceptance of the service. Default shall occur in case of a warning upon maturity, in any case, however, 20 days after maturity and receipt of an invoice or equivalent request for payment.

If the customer is in default of payment, stilm shall be entitled – notwithstanding further rights – to perform further deliveries to the customer only against advance payment.

4. Offsetting, retention

The customer will only be allowed to offset against own claims if these claims are uncontested or have been finally determined. The same shall apply for the exercise of rights of retention unless the right of retention is due to an intentional or grossly negligent breach of contract by stilm.

Besides, the customer will only be allowed to exercise a right of retention if its rights are founded on the same contractual relationship as the claims of stilm against which the customer asserts these rights.

5. Place of performance, passing of risks, storage

Place of performance shall be the registered office of stilm. Unless otherwise agreed, the delivery shall be performed "ex works".

The customer shall be responsible for loading. If the pick-up or shipment is accomplished by a forwarding agent or a carrier, the loading will be performed by this person as a vicarious agent of the customer.

The risks of accidental loss or accidental deterioration shall pass to the customer upon handing-over at the place of performance. If the goods or the services are ready for collection and the pick-up is delayed for reasons stilm is not responsible for, risks will pass to the customer upon receipt of the notice of readiness for pick-up.

If the goods or services are sent to the customer at the customer's request, the risks of accidental loss and of accidental deterioration will pass to the customer upon their delivery to the forwarding agent or the carrier, at the latest, however, upon leaving the works or the warehouse of stilm, regardless of who will bear the forwarding expenses. Unless otherwise agreed, the customer shall bear all costs of transport, transport insurance as well as customs duties. The customer shall have to make sure that the goods or services can be sent to it at the indicated address. If the delivery is not possible for impassability of the shipping point or similar obstacles, the customer will have to bear the additional expenditure arisen through the failed shipping.

6. Delivery times, force majeure, labour dispute

Terms for delivery and execution shall not be binding. Agreements on binding delivery dates need to be in writing. The delivery time will be complied with if by the end of the delivery period the readiness of the goods or the service for pick-up has been reported to the customer or the goods or services have been handed over for dispatch to the forwarding agent or the carrier.

Correct and timely self-supply out of concordant covering transactions of stilm shall be reserved.

stilm shall be entitled to carry out partial deliveries and to invoice them separately.

The compliance with the obligation of delivery by stilm shall require the timely and proper fulfilment of the obligations of the customer.

A default of stilm on account of a warning will only occur if this warning is in writing. A time limit for subsequent performance must be reasonable and must be fixed in writing. In case of doubt, a time limit of at least four weeks shall be considered to be reasonable.

stilm will not be responsible for delays in delivery and service due to force majeure and due to events making it more difficult or impossible for stilm to deliver or to perform the service through no fault of stilm – including but not limited to subsequently occurred difficulties in the procurement of materials, breakdowns, strike, lockout, shortage of staff, shortage of means of transport, administrative orders etc., even if they occur with suppliers, their sub-supplier or subcontractor, even in case of definitely agreed time limits and dates. They shall entitle stilm to postpone the delivery or the service by the term of the impediment plus a reasonable preparatory period or to completely or partly withdraw from the contract for the part not yet fulfilled. If the impediment persists for more than three months, the customer will be entitled to withdraw from the contract regarding to the part not yet fulfilled after fixing of a reasonable final deadline in writing.

If the delivery or service becomes impossible for stilm due to the above-mentioned circumstances, it will be exempted from its obligation of delivery or service.

7. Rights of stilm in case of breach of obligations by the customer

If the customer violates an obligation arising under the contractual relationship, as e. g. regarding the acceptance or pick-up of the goods or services or the acceptance of the service under the service contract, stilm will be entitled to withdraw from the contract after unsuccessful fixing of a reasonable time limit. If the client is responsible for the breach of duty, it will have to compensate stilm for the damages arisen due to that breach of duty or for the additional expenditure arisen (e. g. storage costs) in addition without a prior fixing or a time limit being necessary.

8. Reservation of title

stilm shall reserve the right of property of the goods until the complete fulfilment of the purchase price as well as the complete settlement of all claims under the business relationship with the customer.

The treatment and processing of the reserved goods shall be accomplished for stilm without obliging it. The customer shall be authorised and entitled to the sale, adjunction and confusion of the reserved goods only in the usual and proper course of business provided that the claims described in the following effectively pass over to stilm. The customer shall not

be entitled to dispose otherwise of the reserved goods, in particular to pledging and assignment as security. The customer shall assign to stilm already now all claims arising from the sale of the reserved goods or the adjunction or confusion of the reserved goods with other goods (including any balance claims from current accounts) to the amount of the value of the reserved goods together with any ancillary rights and any priorities in rank in relation to any other claims.

stilm shall accept this assignment. As the value of the reserved goods shall be agreed the amount invoiced by stilm plus a security of 10 % which is, however, not taken into account as far as third-party rights are conflicting with it.

In case of default in payment of the customer stilm shall be entitled to demand the goods back after unsuccessful fixing of a reasonable time limit for the payment. After the taking back of the goods, stilm shall be entitled to the best possible realisation. The realisation proceeds shall be charged up against the liability of the customer – minus reasonable realisation costs. In this case, the claim to performance of the customer shall become void. The taking back as well as the seizure of the reserved goods shall not constitute a withdrawal from the contract.

stilm shall confer the revocable right on the customer to collect the claims assigned to stilm for invoices of stilm on its own behalf as long as the customer fulfils its obligations towards stilm, does not make default and no application for the opening of insolvency proceedings or composition proceedings has been filed. On request, the customer shall have to communicate to stilm the names of the debtors of the claims assigned to stilm, to announce to assignment to them, to give all information on the claims assigned necessary for collection as well as to remit the documents required for collection. stilm shall be allowed as well to announce the assignment to the debtors.

stilm will be obliged to release securities if and as far as they exceed the claims to be secured by at least 20 %.

If third parties seize the goods reserved, the customer will be obliged to point to the privileged property and to inform stilm immediately on the seizure.

9. Warranty, product description

The warranty period for the purchase of new goods shall be two years beginning from delivery, unless a longer period is provided by law according to §§ 438 clause 1 no. 2 BGB (German civil code) (constructions or goods for constructions) or 479 clause 1 and/or clause 2 BGB (right of recourse). Rights to warranty in case of purchase of used goods shall be excluded.

If a notice of defects properly reported is justified, stilm will be entitled to proceed to a substitute delivery at its own option. stilm will not have the right of a subsequent delivery if and as far as the customer asserts claims under a right of recourse according to §§ 479 clause 1 and/or clause 2 BGB. If the substitute delivery fails, the customer will have the right at its own option to withdraw from the contract or to demand rescission of the contract (cancellation of contract) or the corresponding reduction of the agreed price (diminution) and/or to demand compensation for damages if the legal requirements are met.

After having detected a defect, the customer shall not be allowed to make changes to the goods delivered. Otherwise, any warranty shall be excluded.

If the defect has to be attributed to the specifications, to instructions made by the customer or to the material delivered or specified by the customer, stilm will be exempted from the warranty for these defects unless stilm failed to perform a communication incumbent on it on the defects to be expected.

Warranties of qualities of the goods or service need to be in writing. Information in advertising brochures shall not be binding and shall not constitute a warranty.

Unless otherwise agreed by the contract parties, the contractual use of the goods or services of stilm shall ensue from the intended use indicated in the product descriptions and catalogues. Defects resulting from the fact that the goods or services are used in a way not complying with the intended use indicated in the product descriptions and catalogues or that the customer chose another product or service than the product or service recommended by stilm for the use intended by the customer despite consultation by stilm, shall be excluded from warranty. Defects resulting from the fact that the customer did not install the

goods or services professionally according to the instructions given by stilm, shall be excluded from warranty. Slight colour deviations between the goods as well as with regard to colour charts are due to the production process and shall not entitle the customer to assert warranty claims. With respect to length and width, dimensional tolerances of +/- 1% are acceptable, with respect to thickness the tolerance is +/- 2mm. Minor deviations in the colours of the goods when comparing them to each other or to colour samples have to be attributed to the production process and do not entitle the customer to claim warranty. The surface cover is subject to wear depending on the sort and way of how it is used. These wear marks, which may lead to visible differences in colour, are inherent in the product and do not represent a fault. Intensive UV-light may lead to minor discolouration of the surface, apart from having a slight chalk effect, which, however, does not interfere with other factors of lasting quality. Impact protection figures measured and certified according to (HIC 1000) EN 1176/77 refer to the quality of the goods or services at the time of delivery. They may be subject to changes, depending on the place of application, the environment and the influence of external factors during their useful life. Using the goods or storage them in a permanently damp environment may lead to changes in shape, mouldy spots, the development of algae or similar phenomena as results of dampness.

They can be subject to changes depending on the type of use, the environment and the influence of external circumstances during use.

In the event of a notice of defect the customer shall be obliged to a reasonable extent to describe the defect as explicitly as possible. This includes in particular the description of the subsoil, the way of installation, the atmospheric influences and other influences as well as the transmission of significant detailed pictures.

10. Restriction of liability

stilm will only be liable for damages if it or one of its vicarious agents has breached an essential contractual obligation (cardinal obligation) in a way endangering the purpose of the contract or if the damage is to be attributed to gross negligence or intent by stilm or one of its vicarious agents. If the culpable infringement of an essential obligation (cardinal obligation) is not made grossly negligently or wilfully, the liability of stilm will be limited to the damage reasonably foreseeable for it at the conclusion of the contract.

The customer shall be obliged to inform itself on the qualities, proper use as well as existing risks, in particular with regard to an improper use, of the products and to convey this information to its customers as well. A liability of stilm for damages arising from improper use of the products shall be excluded. The restrictions of the liability of stilm mentioned above shall apply to contractual and non-contractual claims. The liability under compulsory legal provisions, contractual agreement or warranty as well as for personal injury and its consequences shall remain unaffected.

11. Exclusion of assignment

The assignment of claims of the customer that are no monetary claims shall need the written consent of stilm. stilm shall only refuse its consent in case of material reasons.

12. Place of fulfilment, place of jurisdiction, applicable law

The place of fulfilment for all obligations under the contractual relationship shall be the registered office of stilm. Unless another exclusive place of jurisdiction is provided by law, the exclusive place of jurisdiction shall be the registered office of stilm GmbH, Gewerbegebiet Larseck, 56271 Kleinmaischeld (Germany). Besides, stilm shall be entitled to sue the customer at its general place of jurisdiction. These General Terms and Conditions and the entire legal relations between the contract parties shall be subject to the law of the Federal Republic of Germany, the provisions of the United Nations Convention on Contracts for the International Sale of Goods (CISG) being excluded.
